

Vermillion – Coal Combustion Residuals (CCRs)

- The Chicago Tribune has run multiple stories about coal ash pits located at the closed Vermillion Power Plant and the potential impact on the Vermillion River.
- Illinois EPA's Bureau of Water is overseeing efforts to shore up the embankment of the ash pits to prevent release to the river, groundwater monitoring at the site and closure of the units.
 - Last week IEPA shared monitoring data and closure options for the site, which LCD staff are reviewing.
 - IEPA has not requested assistance from US EPA.

Ex. 5 Attorney Client (AC)

- LCD will stay in contact with IEPA regarding this site and review the materials provided.
